How to Record with SDRAngel

By Jake

First, use the "add channel" button to add "File Sink"

How to use File Sink

First, add the empty .wav file that was sent using the button in red, and then whenever you can see a LoRa signal coming in hit the button in the green to start and stop the recording.

Once you are done recording, the file should save in the folder where the empty .wav file is in. You may have to zip the file to send it to us
